

Business Direct-Expansion A/C

Change the current way you use energy and make your bill even lower.

Save with **Direct-Expansion (DX) Air Conditioning**

Get long-term savings when you replace or install a new high-efficiency system

Newer, more reliable air-conditioning (A/C) systems can provide lower bills, less maintenance and a more comfortable workplace. However, the initial cost of the system can seem like a big expense. To help pay for your new system, rebates are available for qualifying units (DX).

Direct Expansion A/C

A/C can account for up to 40 percent of your company's electric bill. Older or inefficient cooling equipment can cause your electric bill to be higher and can add repair and maintenance costs. If this is the case for your business, consider upgrading to a new high-efficiency cooling system.

Benefits

- » Lower monthly cooling costs due to higher efficiency
- » Lower maintenance costs on your new unit
- » Saves energy all year

If you would like to estimate the energy and cost savings for a specific air conditioner, visit: energy.gov/eere/femp

DX A/C rebates

How to earn rebates

Rebates are available if you're replacing an old system, or installing a DX system in a new facility.

Rebate amounts vary based on:

- * Unit size
- * Unit type
- * Efficiency level

Eligibility

Qualifying units include:

- » Air or water-cooled air conditioners and condensing units
- » Evaporative-cooled air conditioners and condensing units
- » Air-cooled heat pump – unitary and applied
- » Water-source heat pump – unitary and applied (water-to-air and water-to-water)
- » Air-cooled packaged terminal air conditioners and heat pumps (standard size)
- » Air-cooled single package vertical air conditioners and heat pumps
- » Air-cooled variable refrigerant flow air conditioners and heat pumps
- » Water-source variable refrigerant flow unitary and applied heat pumps
- » Air-cooled, water-cooled or glycol-cooled computer room units
